Start/Completion Date

2000 - 2001

"Those who haven't been to Dartmouth Skiway in Lyme Center, NH, in the last five years will be surprised to find one of the most splendid ski lodges in all ski country, a soaring timber-framed building called the McLane Family Lodge, a center that really captures the essence of a family ski area...Dartmouth, home ski area of many a World Cup racer and Olympian."

First Floor Plan

Second Floor Plan

Banwell Architects designed a new base lodge to replace the outgrown 40-year-old original. The design honors the skiing and Outing Club traditions at Dartmouth College and demonstrates sustainable design principles.

The environmentally oriented project features the use of natural materials from the region. The white pine timber frame and all finish woods are products of well managed New Hampshire and Vermont forests. Piers of New Hampshire granite support a balcony overlooking the skiers' plaza and slopes. The sunny plaza is protected from prevailing harsh northerlies by the wide-angled "V" building shape.
